tomi.glavina@gmail.com | +358491744114 | github.com/tomasglavina | Tampere | EU Citizen (Italy)

Profile

I'm a Tampere-based, final-year software engineering student comfortable working in Finnish. I have hands-on experience building web applications and APIs with TypeScript (Node.js, NestJS), React and Spring Boot, using PostgreSQL. I enjoy collaborative teams where solid engineering practices are part of the daily workflow. Outside of work, you'll find me singing karaoke, still chasing that rockstar energy, though solving bugs is just as satisfying as hitting those high notes.

Education

Tampere University of Applied Sciences – Bachelor of Engineering, Software Engineering Expected **May 2026**
GPA: 4.02/5.0

Skills

Languages: Spanish (Native), English (Fluent), Finnish (B2), Italian (B1)

Programming: JavaScript, TypeScript, Java, Python, C++, C

Frontend: React

Backend & Data: NestJS, Node.js, Spring Boot, FastAPI, Redis, PostgreSQL, MongoDB

DevOps & Tools: Git, Bash, Docker, CI/CD

Work Experience

Full-stack Developer, Gaddr– Stockholm, Sweden (Remote) **September 2025 – Present**

- Owned the design and end-to-end implementation of backend systems including a follower network and a multi-channel notification engine, from proposal and review to delivery (NestJS, PostgreSQL, Redis; Clean Architecture, CQRS).
- Built reusable UI components used across features (React, Tailwind) and introduced standardized README templates and project documentation to reduce setup friction and align development practices.
- Onboarded and mentored 4 interns through pairing, code reviews, and day-to-day support, helping remove blockers and keep work moving.
- Delivered critical features such as a referral tracking system and landing page A/B testing.

Bartender, Aican Oy & The Old Irish Pub – Tampere, Finland **April 2022 – Present**

- Regularly ran solo opening shifts and took shift lead responsibility when management was not on shift, handling day-to-day operations independently.
- Coordinated service during peak hours and resolved customer issues under pressure in a Finnish-speaking environment; awarded Employee of the Month multiple times for reliability and work ethic.

Projects

Drone Transportation Architecture Design—*Spring, React, MQTT* [GitHub Repository](#)

- Designed and implemented a scalable drone fleet management system for food delivery, applying clean software architecture principles to ensure reliable microservice interactions.
- Built end-to-end features including order placement, payload-based automated flight assignment, and real-time delivery tracking using Spring and React.

DevOps Professional Project—*GitLab CI/CD, Docker, React, MongoDB* [GitHub Repository](#)

- Led a team to build a full-stack application, strictly following DevOps principles and GitHub flow.
- Dockerized the frontend and backend; automated build, test, and deployment pipelines via GitLab CI/CD.
- Integrated MongoDB Atlas through Mongoose and Express for data persistence.

Referees

Eemeli Kallio - *Lead Developer - Veracell Oy* | Heidi Mäkinen - *Assistant Manager - Jolene Happy Bar*
